

## Instructions:

To enjoy longer-lasting floral displays, in water that stays fresh and crystal clear, rinse well and repeat (to remove dust created in transit), and arrange your SumiBloom with cut flowers just like other decorative beads. SumiBloom looks lovely arranged in layers and designs, or simply mixed with other colours for effect.

When finished, just rinse and re-use for your next bouquet; you can use your SumiBloom again and again!

Please store your SumiBloom in a waterproof container, as the product will release humidity for a long period after use.

## How it works:

Just like a water filter in your home, the active core of each Sumi traps the unwanted bacteria which cause unsightly green algae and unpleasant odours. Each little ball is big enough to lock in a skip-load of bacteria, for ever!
