

Instructions:

Use straight from the pack as a soil replacer.

For best results, soak well before use to allow full take-up of water and liquid nutrients as required; listen for the fizz as the active Sumi absorbs the solution, and then use just as you would a general purpose compost – with soil, as a topping, or instead of soil.

Use in drainage-free containers; do not be afraid of ‘drowning’, as the natural anti-bacterial action will prevent root rot. Water regularly to re-hydrate. Not suitable for lime-hating varieties.

Use:

Ideal for propagation, house plants, hanging baskets and patio planters. Use neat, or with soil – just like general purpose compost – as a mulch, for benching and crocking, or simply as a decorative topping. Improves drought and temperature tolerance, adds up to 30% extra growing space, increases oxygenation, sweetens soil and controls bacteria.
